

## HEFA Rules for Multi-Rotors and Quad Racers

1. ALL FPV pilots requires a spotter.
2. Inform the flight line of how / what you will be flying. Establish a bit of a plan (as much as possible) with other flyers.
3. Call out your intentions with low passes over the field and validate that people on the flight line have heard you. Remember that this is a "shared space".
4. If you need the field for a five minute period to demo or adjust your machine...ASK the fellow pilots, ...or wait until the field is unoccupied.
